

Assess and remediate your compliance status

Non-compliant assets can create costly problems, yet enforcing compliance policies and assessing assets is difficult and time-consuming. To complicate matters, IT Governance, Risk and Compliance standards are frequently interpreted differently from one auditor to another. As a result, compliance can quickly become a moving target. Reduce your compliance risk with the most comprehensive asset inventory and PC Lifecycle Management solution on the market today.

Numara® FootPrints® Compliance Manager Benefits

- ❖ Improve software utilization while saving money
- ❖ Reliably ensure IT assets adhere to standards and prevent the expensive and disruptive consequences of non-compliance
- ❖ Centralize visibility to anti-virus status and update definitions
- ❖ Minimize uncertainty surrounding compliance
- ❖ Streamline auditing process with minimal disruption
- ❖ Reduce Help Desk costs by providing agents with visibility into software installations and configurations
- ❖ With accurate software usage counts, redistribute license-reducing costs and potential fines
- ❖ Receive automated alerts when assets are out of compliance, reducing vulnerabilities in your environment
- ❖ Visualize environment's compliance status with customizable dashboards
- ❖ Automatically remediate compliance violations

There are many facets to a strong compliance strategy, including accurate asset inventory data. More specifically, this is knowing at any point in time details about which devices reside on your network, user profiles, software compliance and policy management. And, chances are that your organization has turned to various governance bodies that have produced compliance templates such as ISO 27001, ISO 27002, National Institute of Standards and Technology (NIST), PCI and Microsoft® hardening guides. The idea behind applying multiple templates and policies is to reduce the chance of being fined due to an audit and to ensure your environment is secure from threats. The challenge for many IT organizations arises in tying together data from many disparate systems.

With Numara® FootPrints® Compliance Manager, along with FootPrints Inventory Manager, Power Manager, Vulnerability Manager and Patch Manager, you can quickly evaluate and remediate corporate, regulatory and industry compliance requirements and threat levels with a single database and console.

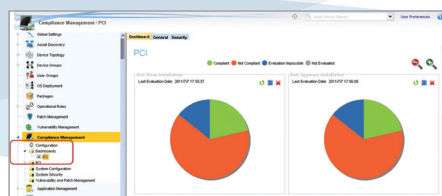

- ❖ Leverage pre-built or create custom compliance templates specific to your industry or company standards
- ❖ Assess licensable software units with intelligent software recognition
- ❖ Assess your systems configuration against the compliance policy
- ❖ Prioritize your non-compliant devices for remediation
- ❖ Remediate with the integrated FootPrints Patch Manager
- ❖ Deliver comprehensive reports to satisfy both internal and external audits

Automation and consolidation is the key

For most organizations, trying to gain control of assets across the enterprise is difficult to accomplish. Gaining visibility into your hardware/software inventory by manually tracking IT assets consumes too much time and too many resources. Organizations need to find a way to automatically identify and track assets across a dynamic network and gain a better understanding of what is out there and what is actually being utilized.

Easily maintain your software license compliance with FootPrints Compliance Manager's intelligent software recognition to automate software asset management through:

- ❖ Automated detection and recognition of software suites and licensable units
- ❖ Normalizing vendor information
- ❖ Categorizing and determining type
- ❖ Providing views of supported, unsupported and unidentified software
- ❖ Automating usage tracking
- ❖ Delivering powerful out-of-the-box software asset management reports and dashboards

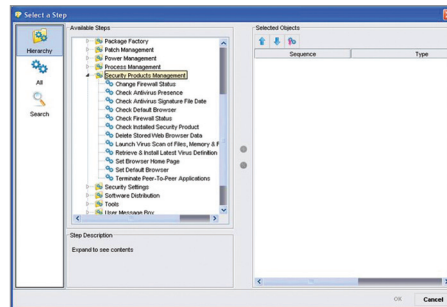

At-a-glance dashboards show anti-virus and anti-spyware installation and update compliance status and can be refreshed on schedule or on-demand.

Features

- Intelligent software recognition** – assess licensable software units, choose what you want to manage, add licenses and track usage with software inventory normalization for consistency
- Security software Manager-of-Managers** – view, control, monitor and update all major anti-virus and anti-spyware software from a single source; apply definition updates and security settings (without defining special commands from an individual vendor), deploy out-of-the-box compliance templates and customizable alerts; view real-time status in customizable dashboards
- Compliance management** – define policies based on your vendors’ licensing agreements and other regulatory standards with essential tools, reports and templates for PCI, ISO 27001, ISO 27002, NIST and Microsoft hardening guides
- Compliance check** – visually identifies your compliance status with new dashboards and drill down functionality
- Software metering** – allows organizations to track the actual usage of any given application and offers the flexibility to redeploy unused software licenses to other users
- Dynamic groups** – allows organizations to identify, group and remediate those devices that do not adhere to defined compliance policies
- Agent/agentless** – supports both agent and agentless discovery of assets and provides detailed configuration information
- Multi-OS support** – supports discovery of software licenses on network devices for Windows®, MacOS®, Linux® and VMware® workstations, servers, laptops, mobile machines and network devices such as printers

IT assets include your anti-virus solutions. Odds are, between company mergers and various platforms deployed, you have multiple solutions for which you are responsible for maintaining. With a single console and consolidated database, you can manage your major anti-virus solutions without having to define special commands for each individual vendor. Report on security configuration states across multiple products like encryption, VPN, anti-fishing, anti-spyware and personal firewalls. And, prevent security threats by actively managing typical points of entry like IM clients, peer2peer file sharing and Web browsers.

Use Alert Manager to set user preferences for compliance alerts.

Reduce your costs

Budgets are now scrutinized more than ever, with IT departments constantly having to justify their expenditure. Continuously monitoring the environment to ensure compliance in real time is essential. FootPrints Compliance Manager provides the data your IT department needs to have better insight into software usage, free up software and more intelligently negotiate the purchase price of software products. FootPrints Compliance Manager, coupled with a comprehensive security & compliance policy strategy, can help you align purchases, contracts and support, thus avoiding unnecessary purchases and keeping maintenance costs to a minimum. Eliminating these potential liabilities allows you to achieve compliance with vendor licensing and accurately plan the IT budget for subsequent years.

The freedom to simply...choose

FootPrints Compliance Manager is part of a fully integrated line of IT Operations Management solutions. The FootPrints family is a modular solution designed to simplify a diverse set of complex service management, asset management and PC Lifecycle needs.

Imagine...having the choice to:

- Decide which components or products are relevant to your business
- Manage various platforms from one console
- Invest in one point product, a solution set of multiple products, or the entire suite
- Buy what you need and not what the vendor dictates

For more information on the minimum requirements necessary to use FootPrints Compliance Manager, please refer to our Technical Specifications document available online.
