

Secure and enhance your IT systems

Exposure to network vulnerabilities jeopardizes your organization's ability to have a secure and reliable network. A critical part of your asset management strategy should include assessing your risk, detecting areas of weakness and remediating known vulnerabilities to prevent unplanned service interruptions and enhance security across your network.

Numara® FootPrints® Vulnerability Manager Benefits

- Reduce risk and costs associated with unplanned service interruptions
- Easily understand the relative severity of vulnerabilities with a simple and easily operated vulnerability assessment solution
- Knowledge base includes Common Vulnerability Scoring System (CVSS) and Common Vulnerabilities and Exposure (CVE) for up-to-date scans
- Intelligently prioritize risk management and mitigation efforts of your assets
- Scan – click – fix: manage entire vulnerability assessment lifecycle from a single console
- Support corporate standards or compliance initiatives through a wealth of predefined reports, executive dashboards and highly flexible customization options

Reducing IT asset vulnerability and support costs by preventing unplanned service interruptions before they occur is a crucial component of any IT security strategy.

Numara FootPrints Vulnerability Manager automates and simplifies the entire vulnerability management process, from detection to remediation. A full set of features enables you to scan any device with an IP address, specify groups of devices to automatically scan on a continual basis, assess vulnerable or non secure configurations, remediate those vulnerabilities and verify ongoing remediation efforts. FootPrints Vulnerability Manager helps you safeguard your organization against the risks that can affect the security, availability or performance of your infrastructure.

Analyze and assess

FootPrints Vulnerability Manager provides IT professionals with the knowledge and tools necessary to take a more proactive approach to vulnerability and configuration management, ultimately making your organization more secure at a lower cost. The solution can identify and address a broad range of vulnerabilities across a diverse set of environments and application types, including client applications, web servers, database servers and infrastructure servers.

Using trusted sources such as the Common Vulnerability Scoring System (CVSS) and Common Vulnerabilities and Exposure (CVE), FootPrints Vulnerability Manager puts up-to-date vulnerability knowledge at your fingertips. This allows you to quickly and accurately assess the impact of vulnerabilities across the business. FootPrints Vulnerability Manager reduces the complexity and labor associated with vulnerability management, making it easy to understand the relative severity of vulnerabilities, intelligently prioritize risk management and mitigation efforts, and focus remediation efforts on key assets.

Scan, click and fix

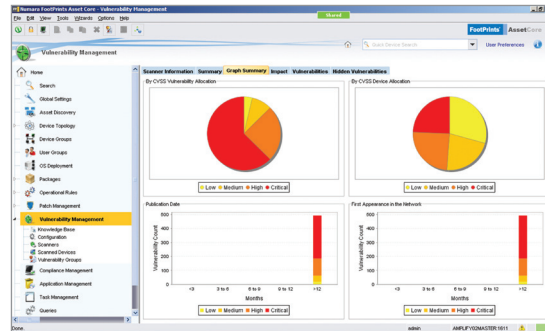

"Scan, click and fix" technology within FootPrints Vulnerability Manager empowers you to manage the entire vulnerability life cycle from a single administration console and reduce the exposure window – the time between identifying a potential vulnerability and fixing it. Once the scan is complete and vulnerabilities are analyzed, remediation actions can be prioritized and executed directly from the same centralized location. Patch deployments and configuration changes for specified devices or groups are just a few mouse clicks away, leaving your business safer and making your job easier. FootPrints Vulnerability Manager addresses a wide range of vulnerability types including:

- Brute-force attacks
- Buffer overflow
- Denial of service and Trojan horses
- Information gathering
- Configuration errors
- Default password settings
- Abnormal usage

Features

- **Broad coverage** – address a wide range of vulnerabilities, including abnormal usage, brute-force attacks, buffer overflow, misconfigurations and more
- **Platform support** – ensure full vulnerability detection and remediation for computers running Windows[®], MacOS[®], Unix[®] and Linux[®]
- **Impact assessment** – assess the impact of vulnerabilities across the business by using trusted industry sources such as Common Vulnerability Scoring System (CVSS) and Common Vulnerabilities and Exposure (CVE)
- **Seamless integration** – integrate with Numara[®] FootPrints[®] Patch Manager and Numara[®] FootPrints[®] Inventory Manager to easily assess and analyze vulnerabilities
- **Support for Microsoft[®] and non-Microsoft solutions** – patch scanning and deployment for products such as Citrix, Exchange[®], SQL, Mozilla Firefox, Adobe[®], Apple[®] iTunes, WinZip[®] and more
- **Dynamic groups** – easily target groups of devices for updates based on patching requirements and computer attributes
- **Report now** – demonstrate results with executive dashboards and comprehensive reporting

FootPrints Vulnerability Manager includes an integrated reporting solution that gives you better visibility into your environment and turns raw data into actionable information. With better insight into your security position, you can ensure vulnerabilities have been properly remediated and support corporate standards or compliance initiatives through a wealth of predefined reports, executive dashboards and highly flexible customization options.

At-a-glance dashboard indicates vulnerability and device allocation by risk level as well as publication date and first network appearance vulnerability counts.

The freedom to simply...choose

FootPrints Vulnerability Manager is one part of a fully integrated line of IT operations management solutions. Each of these products automates and streamlines a specific IT challenge to help you reduce costs and improve service levels. Built from the ground up as a modular, yet integrated system, this family of technologies provides a single, unified solution to simplify a diverse set of complex client life cycle and service management needs.

Imagine...having the choice to:

- Decide which components or products are relevant to your business
- Manage various platforms from one console
- Invest in one point product, a solution set of multiple products, or the entire suite
- Buy what you need and not what the vendor dictates

For more information on the minimum requirements necessary to use FootPrints Vulnerability Manager, please refer to our Technical Specifications document available online.

Who are we?

Founded in 1991, Numara[®] Software is a leading global provider of integrated IT Operations Management solutions. Numara's family of integrated products solve Endpoint Lifecycle Management, Mobile Device Management, Help Desk and Service Desk challenges for physical, virtual and mobile devices, simplifying and optimizing IT Operations Management.
