

Manage PCs at any time, from any location

Organizations require the ability to, efficiently and effectively, conduct business at anytime without disruption. Employees depend on their PCs to be productive throughout the day, and any disruption to IT service results in lost productivity and lost money. This means the IT infrastructure, particularly end-users' PCs, must be fully operational at all times. If a disruption occurs, it must be repaired immediately.

Product features

- 
Remote Support: Remotely view and control users' PCs and quickly resolve desktop issues from afar

- 
Security: Ensure privacy during all remote sessions with encrypted communications, authenticated sessions and user confirmations prior to network connection

- 
Integration: Enable help desk technicians to quickly resolve end-user problems from a single, centralized help desk console

- 
Consolidated Control: Consolidates many common device actions such as reboot, execute programs, chat, transfer files, wake-up, shutdown, remote control, file system, registry, services

- 
End-User Training: End-users can watch the actions a technician is performing on their PC

- 
Audit Trail: Maintain central audit file of remote control sessions and end-user acknowledgements.

As a result of this demand, the IT department is faced with much more stringent SLAs which pose unique pressures and obstacles. Desktop troubleshooting must be handled as quickly as possible with confidence and security.

The freedom to simply...manage PCs anytime, anywhere

Consider the average working day with multiple employees throughout your organization experiencing a wide variety of PC problems. With computers and assets scattered in different buildings, or on different floors, traveling from PC to PC to fix networks or manage routine desktop issues is not feasible. Yet, the help desk technician is still expected to provide immediate network access and problem resolution, and must have the ability to routinely troubleshoot and diagnose desktop issues, while maintaining these assets throughout their lifecycle.

Working with a more IT dependent workforce has changed how IT organizations normally function. Help desk technicians are now expected to become more flexible, better at anticipating needs and learn to accommodate the work force. With Track-It! Remote, businesses can optimize their IT infrastructure and continue to deliver service that meets and exceeds the expectations of their business-users.

The freedom to simply...maintain employee productivity

Track-It! Remote provides help desk technicians with the means to provide consistent desktop support in a simplified way and offers the ability to resolve a user's computer problem from a remote location.

IT departments are no longer limited by the physical constraints of hardware. They are given predictable access to IT resources, anytime, anywhere, thereby increasing productivity for IT departments and employees. With decreased system downtime and rapid request-driven provisioning, employees are up and running faster and maintain a higher level of productivity.

By allowing help desk technicians to remotely view and control users' computers, Track-It! Remote allows administrators to detect, diagnose and resolve PC issues and reduce expenses and increase productivity with a centrally managed system. For instance, administrators can easily see what the user sees after remoting into their machine, and even follow the user's actions without sitting in front of the same computer. Once connected, the solution provides bi-directional file transfer functionality and even clipboard management.

Track-It! family

The freedom to simply...choose

Track-It! Remote is one part of a fully integrated family of Track-It! solutions. Each Track-It! product or capability automates and streamlines a specific IT challenge to help you reduce costs and improve service levels. Built from the ground up as a modular, yet integrated system, the Track-It! family of products provides a single, unified solution to simplify a diverse set of complex IT management needs.

Imagine...having the choice to:

- ✦ Decide which products are relevant to your business and when
- ✦ Manage all of your IT assets from one console
- ✦ Implement quickly
- ✦ Deliver rapid return on investment
- ✦ Reduce the burden of general IT management so you can focus on more strategic activities

For more information on the minimum requirements necessary to use Track-It! Remote please refer to our Technical Specifications document available online.
